PRIOR AUTHORIZATION REPORT

Case ID: HOSP23

Generated: April 20, 2026 15:11 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	maithri
Age	20 years
Gender	Female
TPA / Insurer	101
Disease Desc.	sufferiing from appendix Acute appendicitis
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	K35.80
ICD-10 Description	Other and unspecified acute appendicitis without abscess
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Critical
Medications	surgery required

SOAP NOTE

S — Subjective

20yo female maithri suffering from appendix Acute appendicitis

O — Objective

TPA 101

A — Assessment

Acute appendicitis

P — Plan

Surgery required

CLINICAL EVIDENCE

Evidence Completeness	40% complete
✓ Duration of Symptoms	1 year
X Missing Prior Treatment	Not provided
✓ Severity	high
X Missing Investigations	Not provided
X Missing Specialist Referral	Not provided
Missing Evidence: Prior treatment, Investigations, Referral	

CLINICAL JUSTIFICATION

Justification Score	0.92 / 1.00
---------------------	-------------

The patient, Maithri, a 20-year-old female, presents with a diagnosis of other and unspecified acute appendicitis without abscess (K35.80). The clinical evidence, as outlined in the SOAP note, clearly indicates that the patient is suffering from acute appendicitis, which necessitates prompt surgical intervention. The patient's symptoms have persisted for 1 year, and given the high severity of the condition, surgery is the most appropriate treatment option. The absence of prior treatments and investigations underscores the need for immediate action to prevent potential complications. As stated in the plan, surgery is required to effectively manage the patient's condition. The requested procedure is medically necessary, and the clinical evidence supports the urgency and appropriateness of the intervention. Therefore, based on the clinical presentation and the need for timely intervention, I strongly recommend approval for the surgical procedure to ensure the best possible outcome for the patient.

RISK FLAGS		
Severity	Flag	Description
MEDIUM	Incomplete clinical evidence	Missing evidence: Prior treatment, Investigations, Referral. May negatively affect approval decision.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.
MEDIUM	No diagnostic investigations documented	Lab results, imaging, or diagnostic test data are expected for this condition type.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Insufficient clinical evidence (40% complete) — most fields missing.
- Clinical justification meets documentation quality standards.
- Critical condition — strong medical necessity supports authorization.

Recommendations for Improvement:

- Describe previous treatments tried and their outcomes (e.g. medications, physiotherapy).
- Include lab results, imaging reports, or diagnostic test findings (e.g. ECG, X-ray, blood work).
- Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
- Complete all Clinical Justification fields for significantly better approval odds.
