PRIOR AUTHORIZATION REPORT

Case ID: HOSP24

Generated: April 20, 2026 15:16 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	maithri
Age	30 years
Gender	Female
TPA / Insurer	101
Disease Desc.	suffering from appendix
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	K35.80
ICD-10 Description	Other and unspecified acute appendicitis without abscess
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Critical
Medications	surgery required

SOAP NOTE

S — Subjective

30yo female maithri suffering from appendix

O — Objective

TPA 101

A — Assessment

Appendicitis requiring surgery

P — Plan

Surgery required

CLINICAL EVIDENCE

Evidence Completeness	40% complete
✓ Duration of Symptoms	1 year
✗ Missing Prior Treatment	Not provided
✓ Severity	high
✗ Missing Investigations	Not provided
✗ Missing Specialist Referral	Not provided
Missing Evidence: Prior treatment, Investigations, Referral	

CLINICAL JUSTIFICATION

Justification Score	0.92 / 1.00
---------------------	-------------

Maithri, a 30-year-old female, presents with a diagnosis of other and unspecified acute appendicitis without abscess (K35.80). The patient's clinical presentation, as outlined in the SOAP note, indicates a clear need for surgical intervention. The assessment of appendicitis requiring surgery is supported by the patient's symptoms, which have been ongoing for 1 year, and the lack of prior treatment or investigations that could have potentially alleviated the condition. The severity of the condition is classified as high, underscoring the urgency of the required surgical procedure. Given the clinical evidence and the patient's condition, surgery is not only medically necessary but also the most appropriate treatment option. The patient's condition warrants immediate attention to prevent potential complications associated with appendicitis, such as perforation or abscess formation. Therefore, based on the clinical justification and the medical necessity of the procedure, it is imperative that the requested surgery be approved to ensure the patient receives timely and appropriate care.

RISK FLAGS		
Severity	Flag	Description
MEDIUM	Incomplete clinical evidence	Missing evidence: Prior treatment, Investigations, Referral. May negatively affect approval decision.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.
MEDIUM	No diagnostic investigations documented	Lab results, imaging, or diagnostic test data are expected for this condition type.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Insufficient clinical evidence (40% complete) — most fields missing.
- Clinical justification meets documentation quality standards.
- Critical condition — strong medical necessity supports authorization.

Recommendations for Improvement:

- Describe previous treatments tried and their outcomes (e.g. medications, physiotherapy).
- Include lab results, imaging reports, or diagnostic test findings (e.g. ECG, X-ray, blood work).
- Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
- Complete all Clinical Justification fields for significantly better approval odds.
