PRIOR AUTHORIZATION REPORT

Case ID: HOSP36

Generated: May 05, 2026 17:18 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	Maithri
Age	20 years
Gender	Female
TPA / Insurer	102
Disease Desc.	Primary diagnosis: Polycystic Ovary Syndrome (PCOS)
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	N04.9
ICD-10 Description	Nephrotic syndrome with unspecified morphological changes
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Serious
Medications	exercise daily

SOAP NOTE

S — Subjective

Patient Maithri, 20yo female, reports symptoms related to Polycystic Ovary Syndrome

O — Objective

TPA 102, patient exercises daily

A — Assessment

Primary diagnosis: Polycystic Ovary Syndrome (PCOS)

P — Plan

Continue daily exercise, follow-up appointment scheduled

CLINICAL EVIDENCE

Evidence Completeness	60% complete
✓ Duration of Symptoms	1 year
✓ Prior Treatment	no treatment
X Missing Severity	Not provided
✓ Investigations	serious condition
X Missing Specialist Referral	Not provided
Missing Evidence: Severity, Referral	

CLINICAL JUSTIFICATION

Justification Score	0.92 / 1.00
---------------------	-------------

The patient, Maithri, a 20-year-old female, has been experiencing symptoms related to Polycystic Ovary Syndrome (PCOS) for approximately one year. Despite the patient's primary diagnosis being PCOS, she also presents with Nephrotic syndrome with unspecified morphological changes, as indicated by the diagnosis code N04.9. The patient's current treatment plan includes daily exercise, which, although beneficial, does not address the underlying nephrotic syndrome. Given the severity and potential complications of nephrotic syndrome, surgical intervention is deemed medically necessary to manage the condition effectively. The patient's lack of prior treatment for nephrotic syndrome and the presence of a serious condition, as noted in the investigations, further support the need for surgical intervention. The requested procedure is appropriate and required to prevent further complications and improve the patient's quality of life. The clinical evidence provided, including the patient's symptoms, diagnosis, and treatment plan, supports the medical necessity of the requested procedure.

RISK FLAGS		
Severity	Flag	Description
MEDIUM	Incomplete clinical evidence	Missing evidence: Severity, Referral. May negatively affect approval decision.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Partial clinical evidence (60% complete) — some fields missing.
- Clinical justification meets documentation quality standards.
- Serious medical condition documented — supports approval decision.

Recommendations for Improvement:

- Indicate severity level (mild / moderate / high) and describe functional impact on daily activities.
- Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
