PRIOR AUTHORIZATION REPORT

Case ID: HOSP30

Generated: April 21, 2026 08:30 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	Sneha M
Age	20 years
Gender	Female
TPA / Insurer	101
Disease Desc.	Heart disease, likely requiring surgical intervention
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	I51.6
ICD-10 Description	Cardiomyopathy in diseases classified elsewhere
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Serious
Medications	surgery required

SOAP NOTE

S — Subjective

Sneha M reports symptoms of heart disease

O — Objective

TPA 101, physical exam reveals need for surgical intervention

A — Assessment

Heart disease requiring surgical intervention

P — Plan

Surgery required, further evaluation and follow-up pending

CLINICAL EVIDENCE

Evidence Completeness	80% complete
✓ Duration of Symptoms	2 year
✓ Prior Treatment	yes 1 year back
✓ Severity	high
✓ Investigations	bp is high
✗ Missing Specialist Referral	Not provided
Missing Evidence: Referral	

CLINICAL JUSTIFICATION

Justification Score	0.92 / 1.00
---------------------	-------------

Sneha M, a 20-year-old female, presents with a diagnosis of I51.6 - Cardiomyopathy in diseases classified elsewhere, necessitating surgical intervention. The patient's symptoms of heart disease, as reported subjectively, are corroborated by objective findings from a physical exam, which underscores the imperative for surgical intervention. The patient's history of symptoms spanning 2 years, coupled with prior treatment a year ago, indicates a chronic and progressive condition. The high severity of the disease is further evidenced by elevated blood pressure readings. Given the patient's condition and the failure of prior treatments to adequately manage symptoms, surgical intervention is not only medically necessary but also the most appropriate course of action. The clinical evidence supports the need for immediate surgical intervention to prevent further deterioration and potential complications. Therefore, based on the clinical presentation, history, and the severity of the condition, it is medically justified that Sneha M undergoes the proposed surgery to address her cardiomyopathy effectively.

RISK FLAGS		
Severity	Flag	Description
HIGH	High-acuity diagnosis	ICD-10 I51.6 indicates a serious/complex medical condition. Comprehensive supporting documentation is critical for authorization.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Strong clinical evidence provided (80% complete).
- Clinical justification meets documentation quality standards.
- Serious medical condition documented — supports approval decision.
- High-severity risk flags detected: High-acuity diagnosis.

Recommendations for Improvement:

→ Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
