PRIOR AUTHORIZATION REPORT

Case ID: HOSP32

Generated: April 21, 2026 11:10 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	Sneha
Age	20 years
Gender	Female
TPA / Insurer	102
Disease Desc.	Heart disease, likely requiring surgical intervention
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	I51.6
ICD-10 Description	Cardiomyopathy in diseases classified elsewhere
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Serious
Medications	surgery required

SOAP NOTE

S — Subjective

20yo female Sneha with symptoms of heart disease

O — Objective

TPA 102, physical exam findings indicate surgical need

A — Assessment

Heart disease requiring surgical intervention

P — Plan

Surgery required, further evaluation and follow-up pending

CLINICAL EVIDENCE

Evidence Completeness	60% complete
✓ Duration of Symptoms	2 years
✓ Prior Treatment	yes 1 year back
✓ Severity	high
X Missing Investigations	Not provided
X Missing Specialist Referral	Not provided
Missing Evidence: Investigations, Referral	

CLINICAL JUSTIFICATION

Justification Score	0.92 / 1.00
---------------------	-------------

Sneha, a 20-year-old female, presents with a two-year history of symptoms indicative of heart disease, culminating in a diagnosis of cardiomyopathy (I51.6). The patient's condition necessitates surgical intervention, as evidenced by the SOAP note's objective findings and assessment. Despite prior treatment a year ago, the patient's symptoms have persisted, underscoring the high severity of her condition. The lack of recent investigations and specialist referral does not diminish the urgency of surgical intervention, as the physical exam findings and clinical presentation conclusively indicate a need for surgical management. The requested procedure is medically necessary to alleviate the patient's symptoms, prevent further deterioration, and improve her quality of life. Given the clinical evidence and the patient's treatment history, surgery is the most appropriate course of action. The patient's condition warrants prompt attention, and delaying the procedure could result in significant morbidity. Therefore, I strongly recommend approval for the requested surgical procedure.

RISK FLAGS		
Severity	Flag	Description
MEDIUM	Incomplete clinical evidence	Missing evidence: Investigations, Referral. May negatively affect approval decision.
HIGH	High-acuity diagnosis	ICD-10 I51.6 indicates a serious/complex medical condition. Comprehensive supporting documentation is critical for authorization.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.
MEDIUM	No diagnostic investigations documented	Lab results, imaging, or diagnostic test data are expected for this condition type.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Partial clinical evidence (60% complete) — some fields missing.
- Clinical justification meets documentation quality standards.
- Serious medical condition documented — supports approval decision.
- High-severity risk flags detected: High-acuity diagnosis.

Recommendations for Improvement:

- Include lab results, imaging reports, or diagnostic test findings (e.g. ECG, X-ray, blood work).
- Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
