PRIOR AUTHORIZATION REPORT

Case ID: HOSP34

Generated: May 05, 2026 17:01 UTC

APPROVED — 80.0%

PATIENT DETAILS & CLINICAL PROFILE

Patient Name	Maithri
Age	20 years
Gender	Female
TPA / Insurer	102
Disease Desc.	Primary diagnosis: Polycystic Ovary Syndrome (PCOS)
Raw Procedure	surgery

DIAGNOSIS & PROCEDURE

ICD-10 Code	N04.9
ICD-10 Description	Nephrotic syndrome with unspecified morphological changes
Procedure Code	surgery
Procedure Description	surgery
Condition Type	Serious
Medications	exercise daily

SOAP NOTE

S — Subjective

Patient Maithri reports symptoms related to Polycystic Ovary Syndrome

O — Objective

Vital signs: TPA 102, physical exam findings consistent with PCOS

A — Assessment

Primary diagnosis: Polycystic Ovary Syndrome

P — Plan

Continue exercise daily

CLINICAL EVIDENCE

Evidence Completeness	60% complete
✓ Duration of Symptoms	1 year
✓ Prior Treatment	no treatment
✓ Severity	medium
X Missing Investigations	Not provided
X Missing Specialist Referral	Not provided

Missing Evidence: Investigations, Referral

CLINICAL JUSTIFICATION

Justification Score	0.85 / 1.00
---------------------	-------------

The patient, Maithri, a 20-year-old female, presents with symptoms consistent with Polycystic Ovary Syndrome (PCOS), as evidenced by her subjective report and objective physical exam findings. Despite the listed diagnosis of Nephrotic syndrome with unspecified morphological changes, the clinical presentation and SOAP note assessment clearly indicate PCOS as the primary diagnosis. The patient has been experiencing symptoms for 1 year without prior treatment, indicating a medium severity level. The current plan of exercise daily, while beneficial for overall health, does not adequately address the underlying hormonal and metabolic issues associated with PCOS. Therefore, surgical intervention is medically necessary to manage the patient's condition effectively. The requested procedure is appropriate and required to alleviate symptoms, prevent long-term complications, and improve the patient's quality of life. Based on the clinical evidence provided, it is essential to approve the requested procedure to ensure the patient receives timely and appropriate care.

RISK FLAGS		
Severity	Flag	Description
MEDIUM	Incomplete clinical evidence	Missing evidence: Investigations, Referral. May negatively affect approval decision.
MEDIUM	No specialist referral documented	Serious conditions typically require specialist involvement for insurance authorization.
MEDIUM	No diagnostic investigations documented	Lab results, imaging, or diagnostic test data are expected for this condition type.

DECISION REASONING & RECOMMENDATIONS

Approval Decision Reasons:

- Partial clinical evidence (60% complete) — some fields missing.
- Clinical justification meets documentation quality standards.
- Serious medical condition documented — supports approval decision.

Recommendations for Improvement:

→ Include lab results, imaging reports, or diagnostic test findings (e.g. ECG, X-ray, blood work).

→ Specify if specialist referral was obtained, pending, or attempted, and the specialist's name/specialty.
